

THE DATE NIGHT PLANNER

USER STORY:

As a user who can't go out for a date night, I want an application to generate a date night including meal, matching cocktail, and movie ideas based on my food category and movie genre preferences. This will help me come up with a unique and fun date night from the comfort of my own home.

1
Title Page:
Click button to generate data

Each page has a nav bar (drop-down on small screens) with three options: meal, movie, and your date. These links navigate to their corresponding pages.

2
Meal options Page:
Drop down menu to choose food category

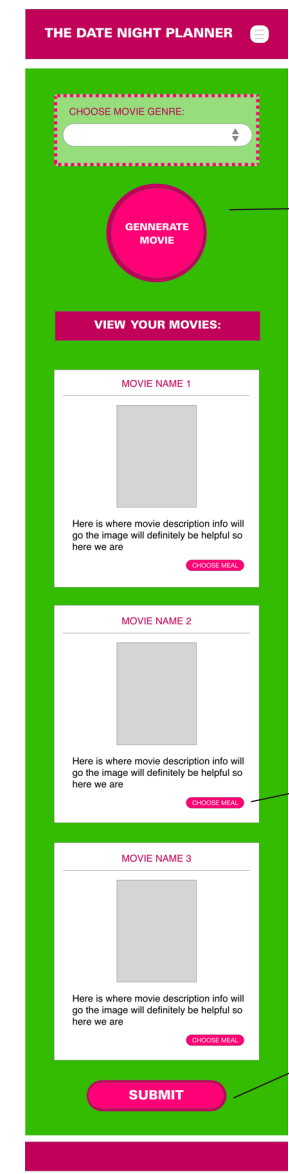

Click button to generate meal options (when the user clicks generate dinner view your dinner menu and view cocktail recommendations populated to the page)

Click choose on Recipe Card and Cocktail Card to save to local storage

Click submit at the bottom to move to movie options page

3
Movie options Page:
Drop down menu to choose movie genre

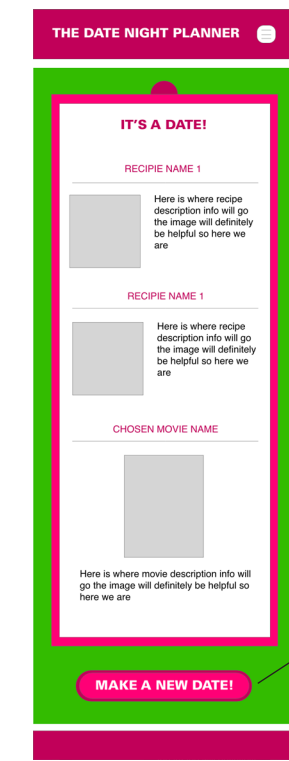

Click button to generate movie options (when the user clicks generate movie, movie card recommendations populated to the page)

movie card will be created from OTT details API

Click choose Movie on Movie Card to save to local storage

Click submit at the bottom to move to results page

4
Movie options Page:
Objects selected by user and stored in local storage will be populated to the "It's a date!" card together

Click make a new date at the bottom to restart from home page
