User manual Logistics Company

1 Operating the system as a Logistic Company

Upon logging in as a logistics company with credentials specified above, the user will be transported to a window called "Admin dashboard". In the window, buttons labeled "Add client", "Add container", "Logout", "Search", "Delete Marked" and text fields labeled "Name" and "Email" will appear. Below, there will be a table displaying existing clients, with the clients' credentials specified under each column of the table.
Below, the functionalities of each button are described.

1.1 Add client

Upon clicking the "Add client" button, the user will be transported into the "Add client" window. In the window, there will be text fields labeled "Name", "Email", "Reference Person", "Password" and "Address", all meant to be filled with the new client's credentials. Below are two buttons, titled "Add client" and "Cancel". To go back into the Admin Dashboard window, press "Cancel". To add a new client, specify all the credentials in the text fields and click "Add client". If not all credentials have been filled out, a message will appear, informing the user that not all fields were filled out. Furthermore, if a client with the email entered already exists, an error will appear as the system does not allow two clients to have the same email.
When all text fields have been filled and the "Add client" button is pressed, the program will go back to the "Admin dashboard" window. A newly added client will now be displayed in the table.

1.2 Add container

When the "Add container" button is pressed, the user will be transported into the "Add container" window. In the window, there will be a text box labeled "Location" and buttons labeled "Add container" and "Cancel".
To go back into the Admin Dashboard window, press "Cancel".
To add a container, specify the location and click the button "Add container".
If the text field has not been filled out, a message will appear, informing the user that not all fields were filled out.

1.3 Logout

When the "Logout" button is pressed, the user will be transported back into the "Log in" window.

1.4 Delete marked

To delete clients from the table, a check box in the last column of the table must be ticked for each row to-be-deleted clients.
When the clients have been marked, and the button "Delete marked" is pressed, the marked clients are deleted and no longer show up in the table.

1.5 Search

To search for a specific client, at least one of the text fields labeled "Name" and "Email" have to be filled with the corresponding credentials of the searched client.
When one or more text fields have been filled in and the "Search" button is clicked, only clients with matching credentials will be shown in the table.
To see all the clients, empty the "Name" and "Email" text fields, and click "Search"
