# Turning off Pre-Fetch in Chrome

Pre-Fetch sounds like a great idea if you only use your Browser for internet webpages. But in the case of the Network Module "pre-fetching" a URL frequently causes an action to take place in the module with undesirable consequences. Chrome keeps changing the process to turn off Pre-Fetch, but here is how it is done in July 2023.
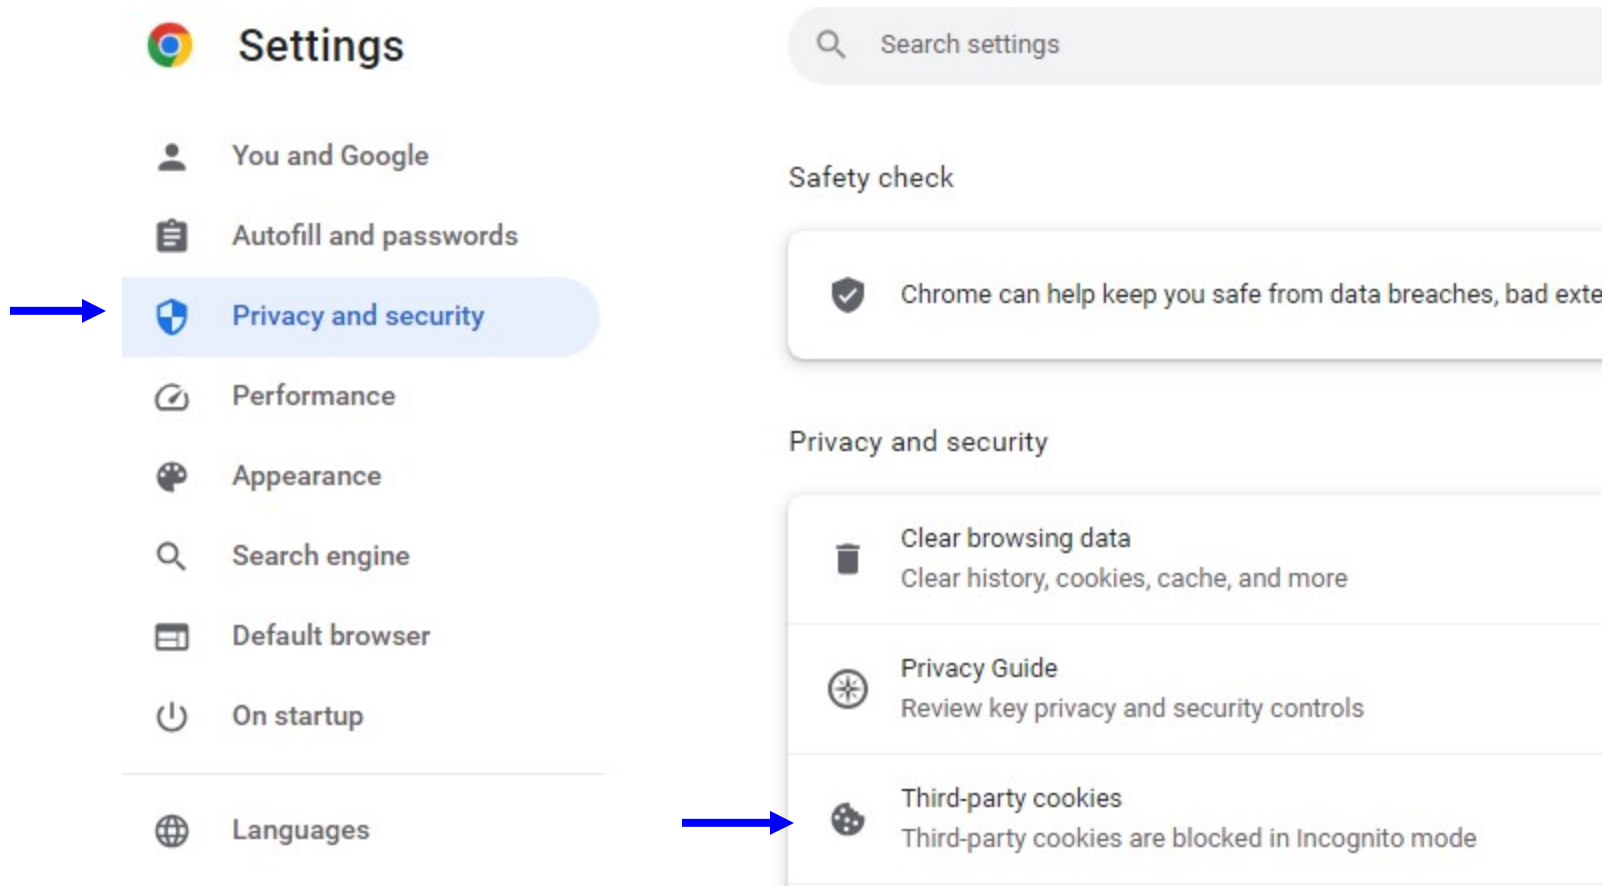

Running the following version on July 6, 2023

✓ Chrome is up to date
Version 114.0.5735.199 (Official Build) (64-bit)
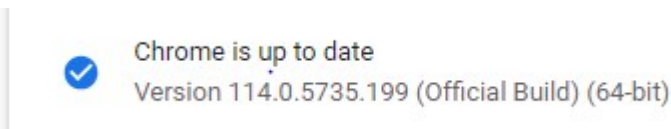

Click the three dots to open Settings

Select "Privacy and security" then select "Third-party cookies"

Scroll down and select "Preload pages"

→ Preload pages
No preloading   ▸

Select "No preloading"

← Preload pages

Choose whether to preload pages

→ ⦿ No preloading
Pages load only after you open them.
