# Jenkins Start Process

## Problem

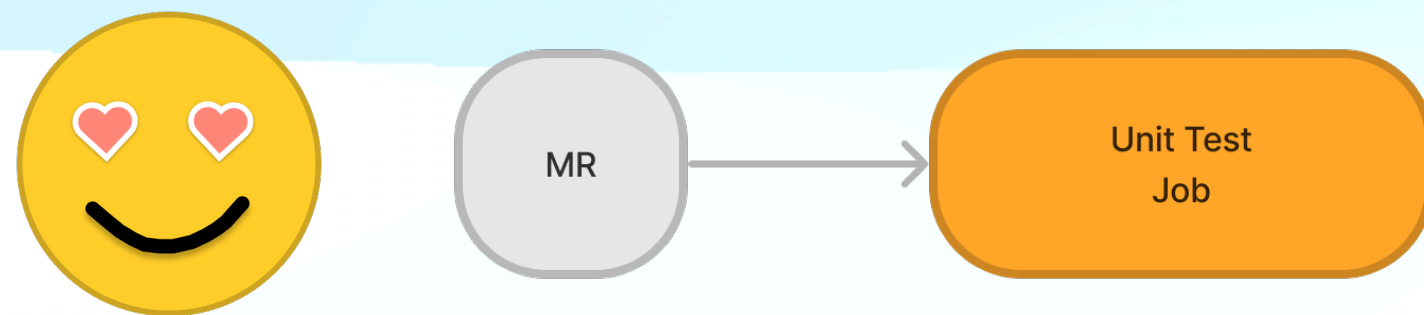

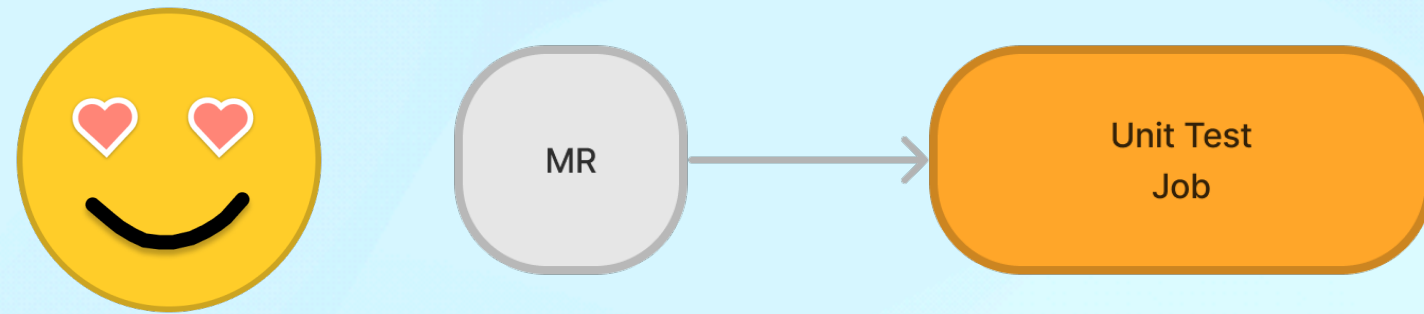

# Jenkins Start Process

## Problem

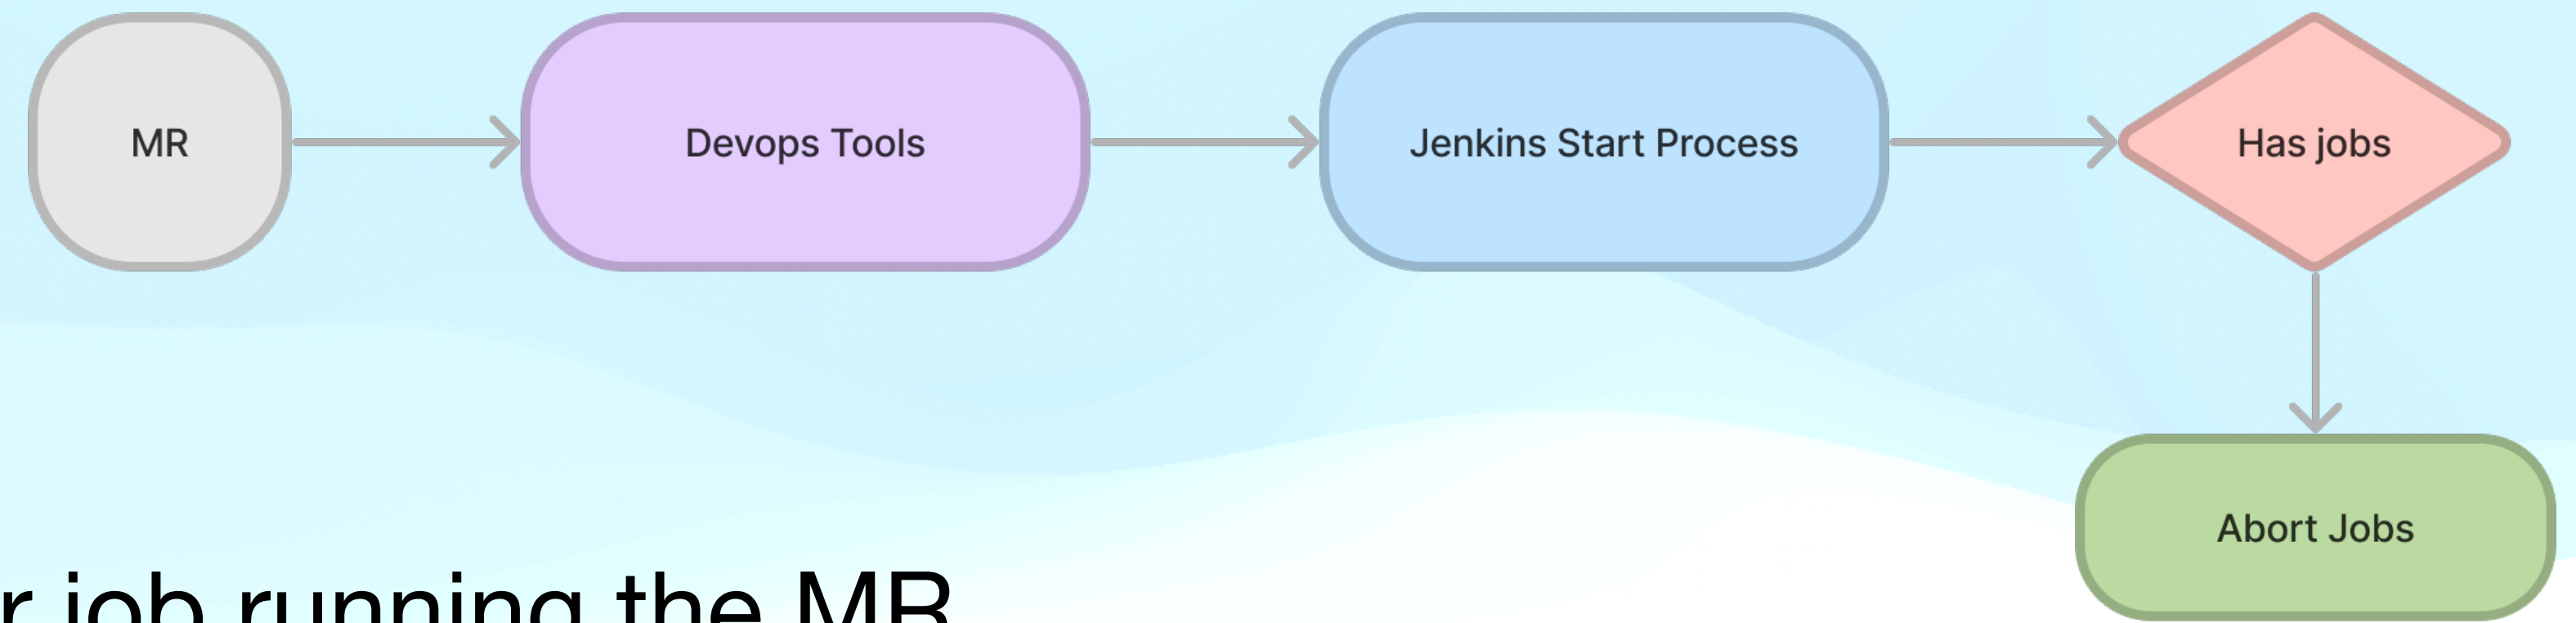

# Jenkins Start Process

## Problem

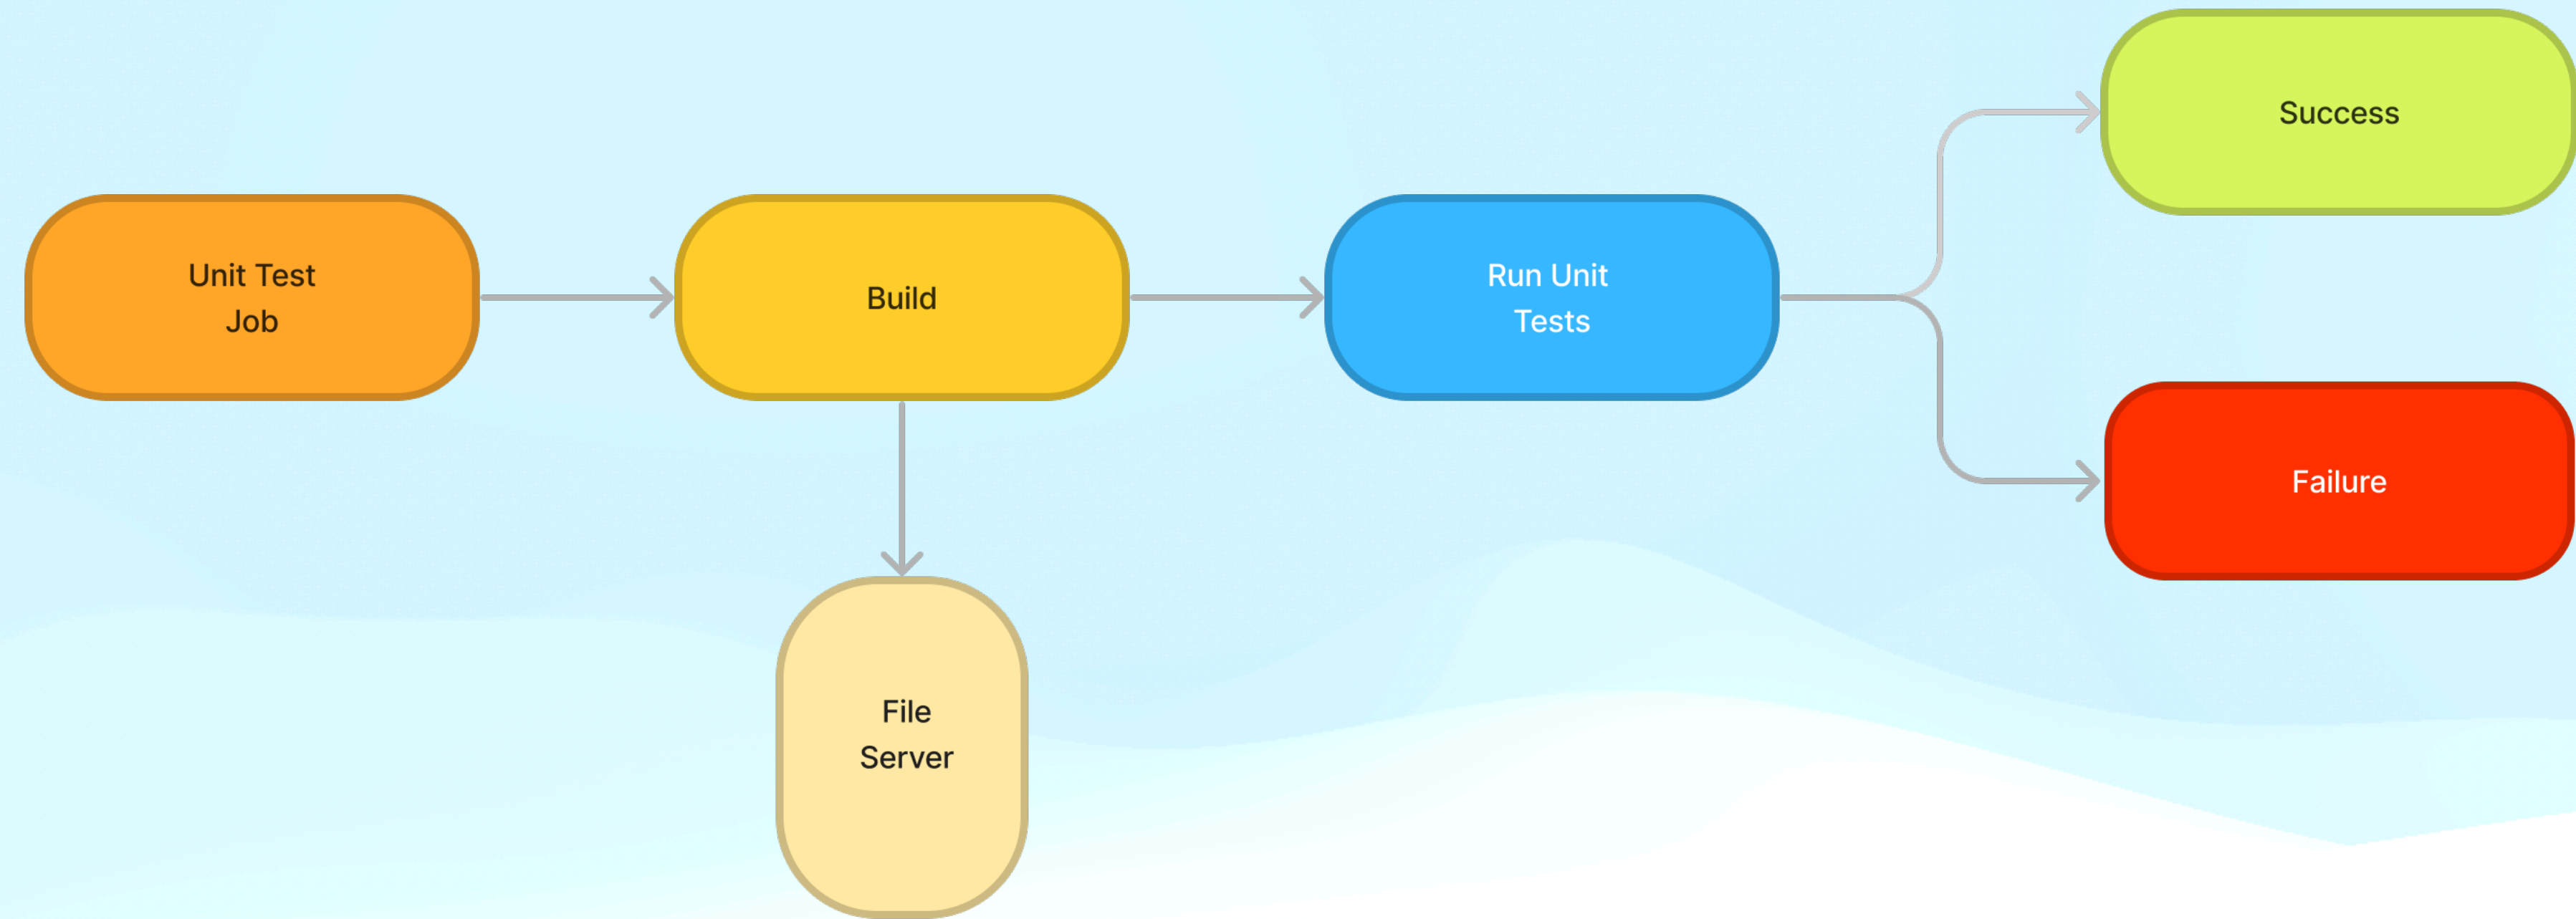

# Jenkins Start Process

- Checks if there is another job running the MR and aborts it if exists
- Triggers the Unit Test job

# Unit Test

- Blocks merging of MR if any test is failed
- Builds MR and uploads it to File Server
- Triggers Smoke, Snapshot and Regression Tests jobs

# Unit Test

# Unit Test

## Classic Unit Test Approach

```
✓  
37     func test_load_InvokesViewMethods() {  
38         XCTAssertFalse(view.invokedPrepareUI)  
39         XCTAssertFalse(view.invokedSetPaymentInformationTitle)  
40  
41         presenter.load()  
42  
43         XCTAssertTrue(view.invokedPrepareUI)  
44         XCTAssertTrue(view.invokedSetPaymentInformationTitle)  
45     }
```

# Unit Test

## Classic Unit Test Approach

```
✓  
37 func test_load_InvokesViewMethods() {  
38     XCTAssertFalse(view.invokedPrepareUI)  
39     XCTAssertFalse(view.invokedSetPaymentInformationTitle)  
40  
41     presenter.load()  
42  
43     XCTAssertTrue(view.invokedPrepareUI)  
44     XCTAssertTrue(view.invokedSetPaymentInformationTitle)  
45 }
```

```
✓  
37 func test_load_InvokesViewMethods() {  
38     XCTAssertFalse(view.invokedPrepareUI)  
39  
40     presenter.load()  
41  
42     XCTAssertTrue(view.invokedPrepareUI)  
43 }
```

# Unit Test

## SwityKit Unit Test Approach

### SwityKit

---

SwityKit is an infrastructure that makes easy unit test writing and aims to increase coverage.

Used with [SwityTestGenerator](#). This xcode source editor extension helps to mock generation.

### Benefits

---

-  Generates assertions to the debug log
-  Reduces test run time by ~40%
-  It prevents us from writing incomplete tests
-  Less mock code
-  Tests that it is invoked in the correct order.

<https://github.com/aytugsevgi/SwityKit>

# Unit Test

## Unit Test Generation

```
Test Case '-[GRCCollectionsModuleTests.GRCPriceComparisonPresenterTests test_viewDidLoad_InvokesViewMethods]'
started.
view.assertInvokes([.showLoading,
                    .prepareUI,
                    .setCustomBarButton(style: (extension in
                                        TYCoreUtils):_C.UINavigationItem.CustomButtonStyle.image(image:
                                        "grcNavigationBackButton", bundle:
                                        Optional(GRCCollectionsModule_GRCCollectionsModule.bundle)), position: (extension in
                                        TYCoreUtils):_C.UINavigationItem.CustomButtonPosition.left, target:
                                        Optional(GRCCollectionsModule.GRCPriceComparisonPresenter), selector:
                                        handleBackButtonTapped),
                    .setAccessibilityIdentifiers,
                    .prepareCollectionViewForListingKit])
interactor.assertInvokes([.fetchPriceComparisonList(request:
                        GRCCollectionsModule.GRCPriceComparisonRequest(productCodes: "121,121", lat: 53.4, lon: 34.3))])
```

# Unit Test

## SwiftyKit Unit Test Approach

```
✓ func test_load_InvokesViewMethods() {  
45     invokedNothing()  
46  
47     presenter.load()  
48  
49     view.assertInvokes([.prepareUI,  
50                         .setAccessibilityIdentifiers,  
51                         .setTitleLabel("title"),  
52                         .setIconImageView(imagePath: "icon"),  
53                         .setBackgroundColor(hexCode: "backgroundColor"),  
54                         .setTitleLabelColor(hexCode: "titleColor")])  
55  
56     invokedNothing(excepts: [view])  
57 }
```

# Unit Test

## SwityKit Unit Test Approach

```
✓ func test_load_InvokesViewMethods() {  
45     invokedNothing()  
46  
47     presenter.load()  
48  
49     view.assertInvokes([.prepareUI,  
50                         .setAccessibilityIdentifiers,  
51                         .setTitleLabel("title"),  
52                         .setIconImageView(imagePath: "icon"),  
53                         .setBackgroundColor(hexCode: "backgroundColor"),  
54                         .setTitleLabelColor(hexCode: "titleColor")])  
55  
56     invokedNothing(excepts: [view])  
57 }
```

```
✗ func test_load_InvokesViewMethods() {

# Regression Test

- Runs in production with mockable exceptions
- Created as functional tests for user-accessed pages
- Runs daily and after RC creation
- Tests merge requests (muted)
- QA reviews daily results

# Regression Test

## XCTestPlanner [↗](#)

---

A tool for managing [Xcode Test Plans](#) from command line.

## Why? [↗](#)

---

Test plans are a valuable tool for organizing and managing your tests in Xcode projects. However, manually editing large number of test plans can be time-consuming and tedious (sometimes crashy).

And also, It's not possible to selectively run or skip specific test classes with a test plan.

## Features [↗](#)

---

XCTestPlanner simplifies to edit test plans by providing command-line interface for adding or removing tests, setting language and region options, and adjusting the rerun numbers.

- Handle your test plans from command line interface instead of Xcode.
- Simplify your CI setups by creating a single test plan that can be customized for various configurations.
- Easily adjust the number of test repetitions for different environments.
- Control the Localizations by passing parameters.
- Conveniently set environment variables/ arguments for your CI pipelines.

# Regression Test

## Mute

The screenshot displays two workflow runs from the 'skynet' application. The first run, 'Daily Develop Results', shows 169 passes, 19 failures, 3 reruns, and 5 skips. The second run, 'MR Test Result | Muted: 19', shows 169 passes, 0 failures, and 5 skips. Both runs include buttons for 'HTML Report' and 'Download Report'. The second run also includes a 'Merge Request' button. A user profile picture is visible at the bottom of the screenshot.
