

#17

# Interleaved Randomized Benchmarking of gates with delay

Mentee : Jeongwon Kim

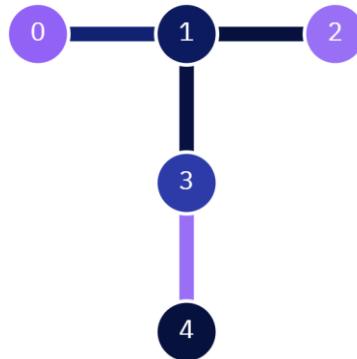

Sungkyunkwan University, Masters in Nanoscience & Technology

Mentor : Toshinari Itoko

# What is IRB?

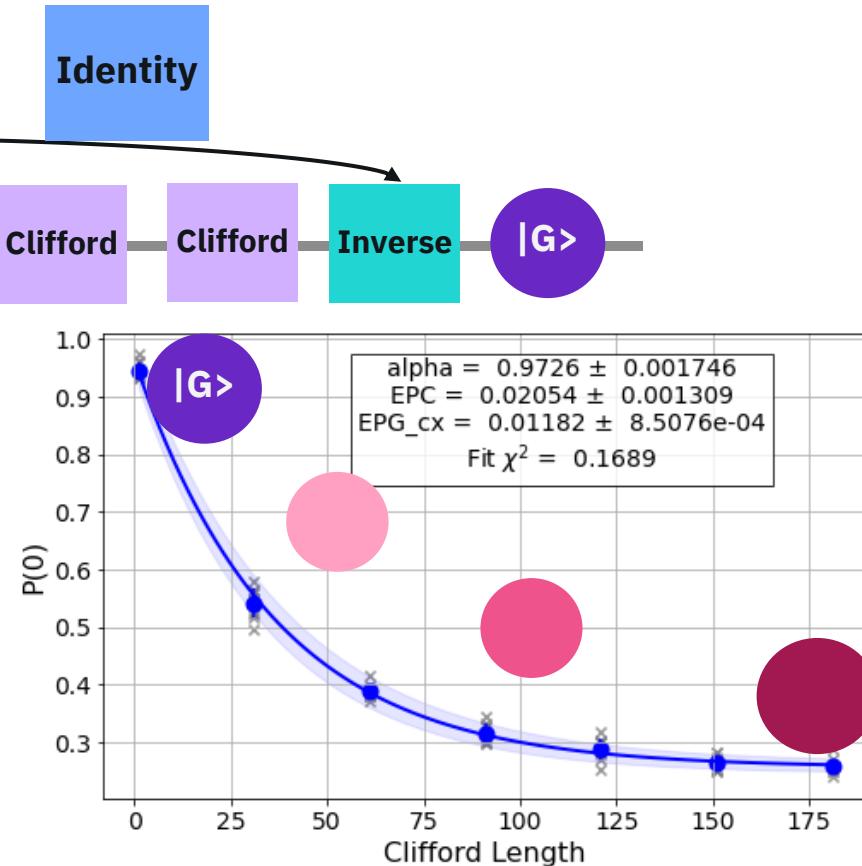

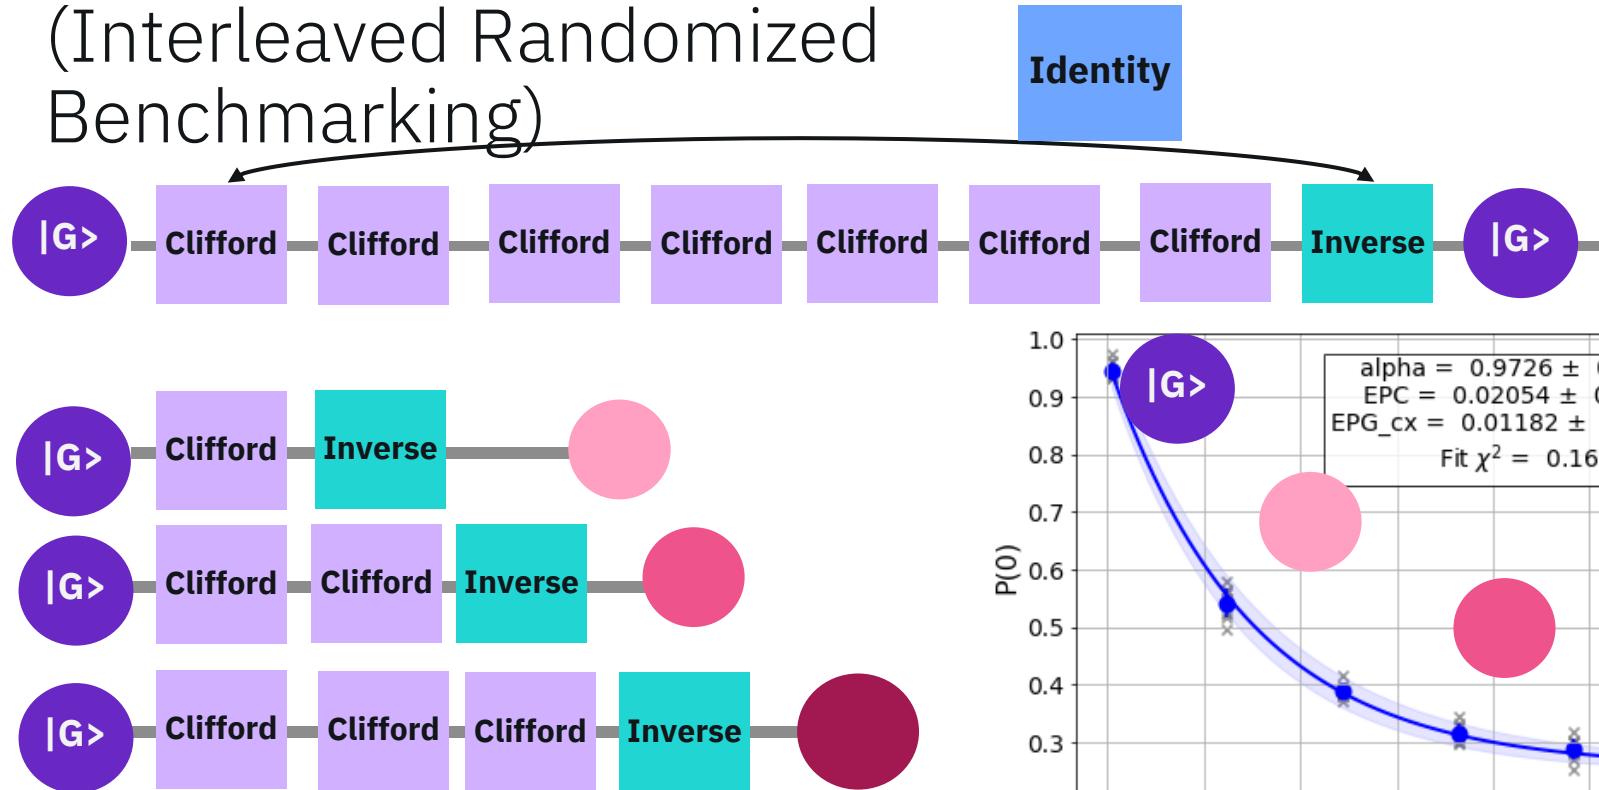

## (Interleaved Randomized Benchmarking)

Qubit	T1 (us)	T2 (us)	Frequency (GHz)	Single-qubit Pauli-X error	CNOT error
Q0	110.84	142.61	5.301	3.093e-4	0_1: 1.089e-2
Q1	102.43	86.56	5.081	6.154e-4	1_3: 9.034e-3 1_2: 8.858e-3 1_0: 1.089e-2
Q2	108.84	169.83	5.322	2.517e-4	2_1: 8.858e-3
Q3	115.04	23.93	5.164	2.847e-4	3_4: 2.135e-2 3_1: 9.034e-3
Q4	119.2	146.01	5.052	4.357e-4	4_3: 2.135e-2

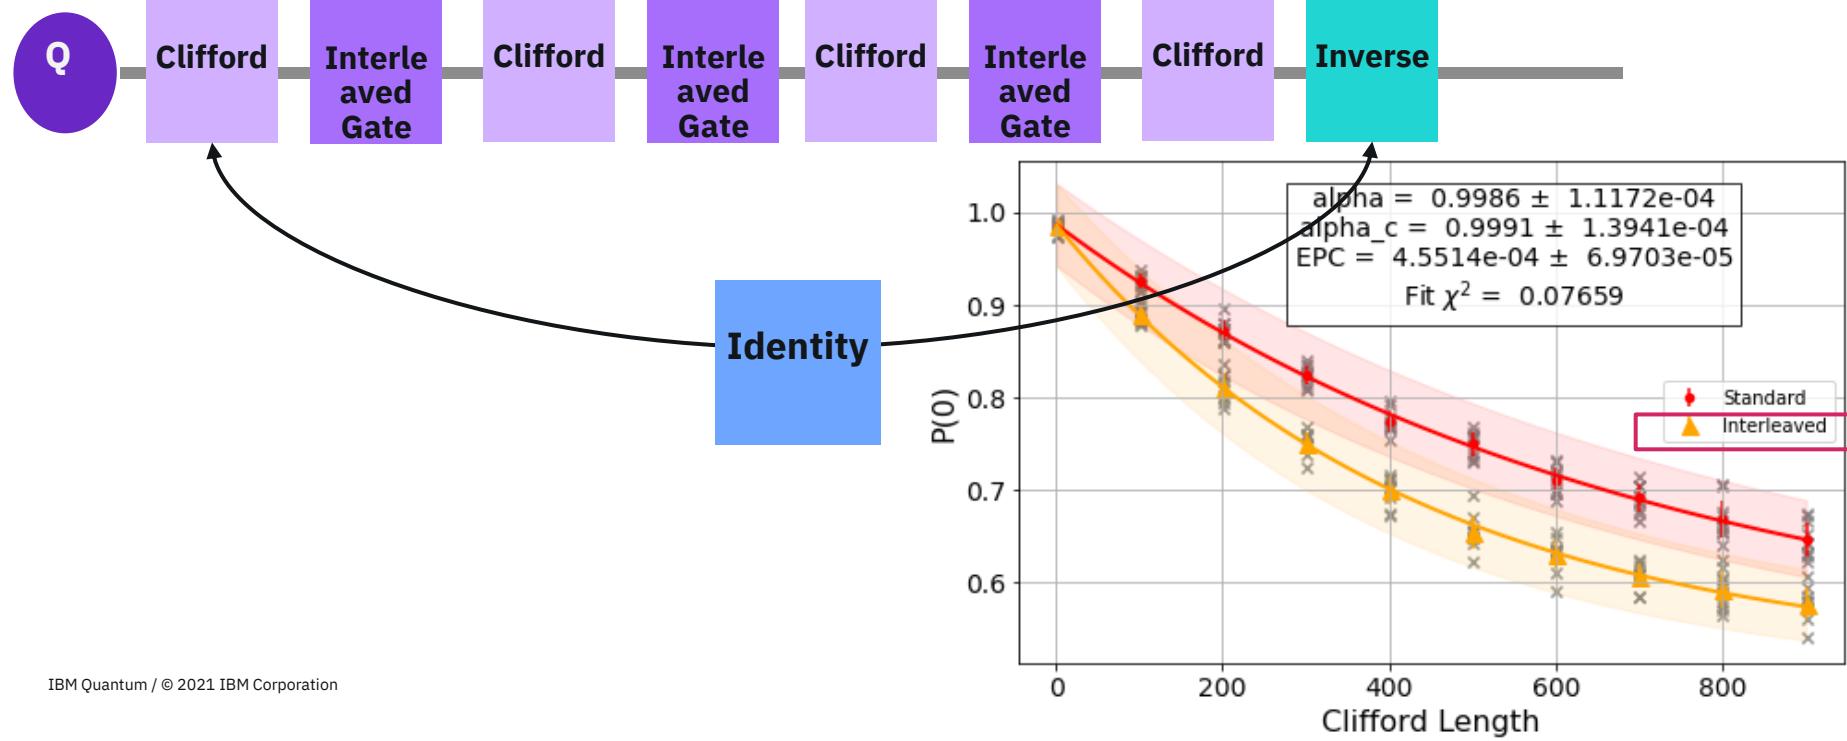

# What is IRB?

## (Interleaved Randomized Benchmarking)

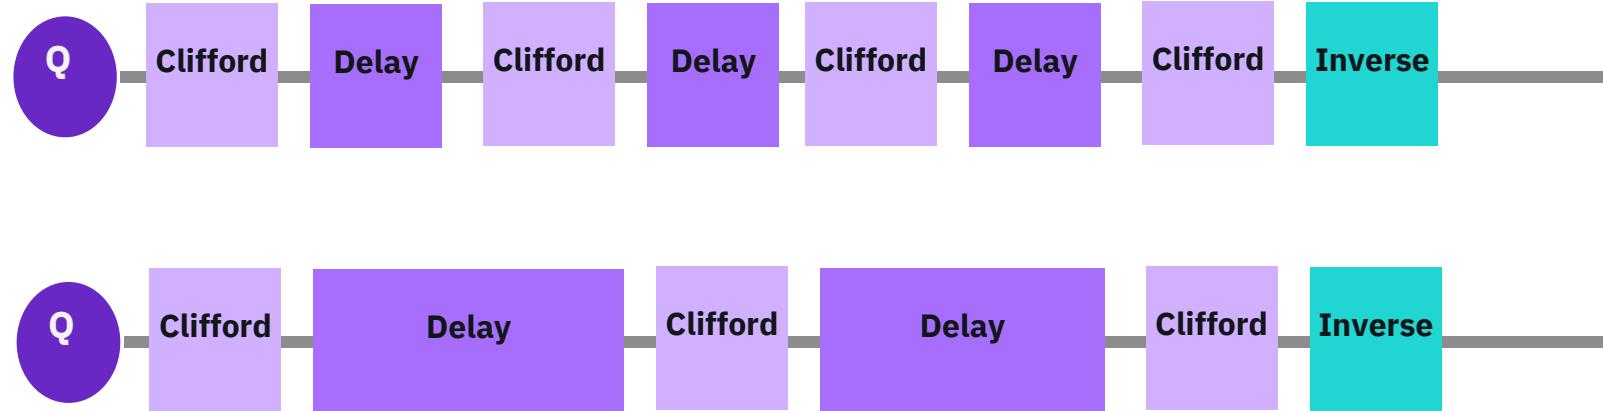

# What is IRB?

## (Interleaved Randomized Benchmarking)

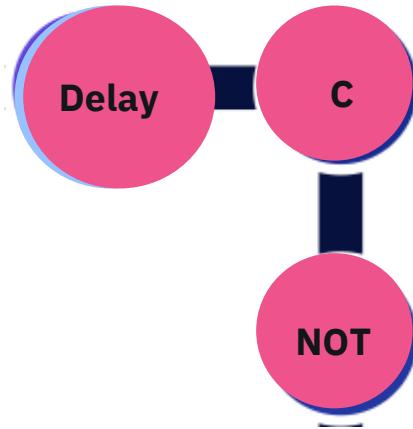

# Project Goal :

## Interleave ‘Delay’ Instruction

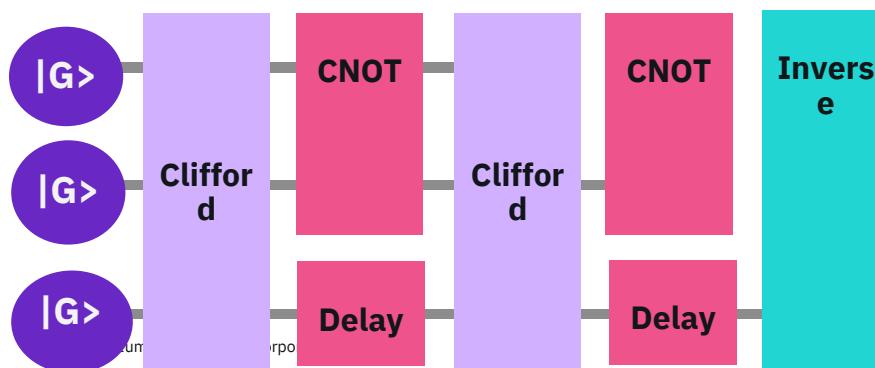

# Why ‘Delay’ ?

→ T1, T2 → Theoretical Coherence Error  
 → IRB with ‘delay’ → Real value

→ Theory explains the real world Well !!!

# Progress

## Set up the Virtual **Development Environment**

```
conda create -y -n QiskitDevenv python=3  
conda activate QiskitDevenv
```

## Installing Terra from **Source**

Installing from source requires that you have a C++ compiler on your system that supports C++11.

[Compiler for Linux](#)   [Compiler for macOS](#)   [Compiler for Windows](#)

On Windows, it is easiest to install the Visual C++ compiler from the [Build Tools for Visual Studio 2019](#). You can instead install Visual Studio version 2015 or 2017, making sure to select the options for installing the C++ compiler.

## Randomized Benchmarking tutorial fails with the latest release #756
